

TRANSITION DIAGRAMS

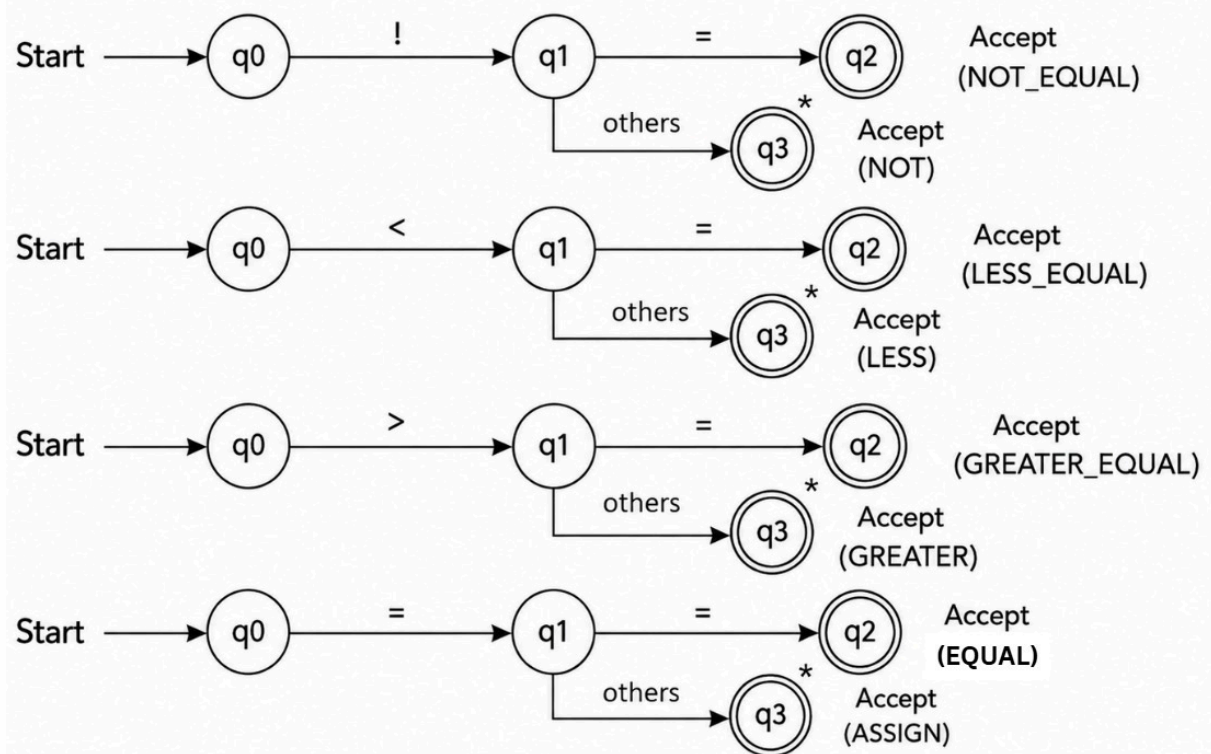

IDENTIFIER

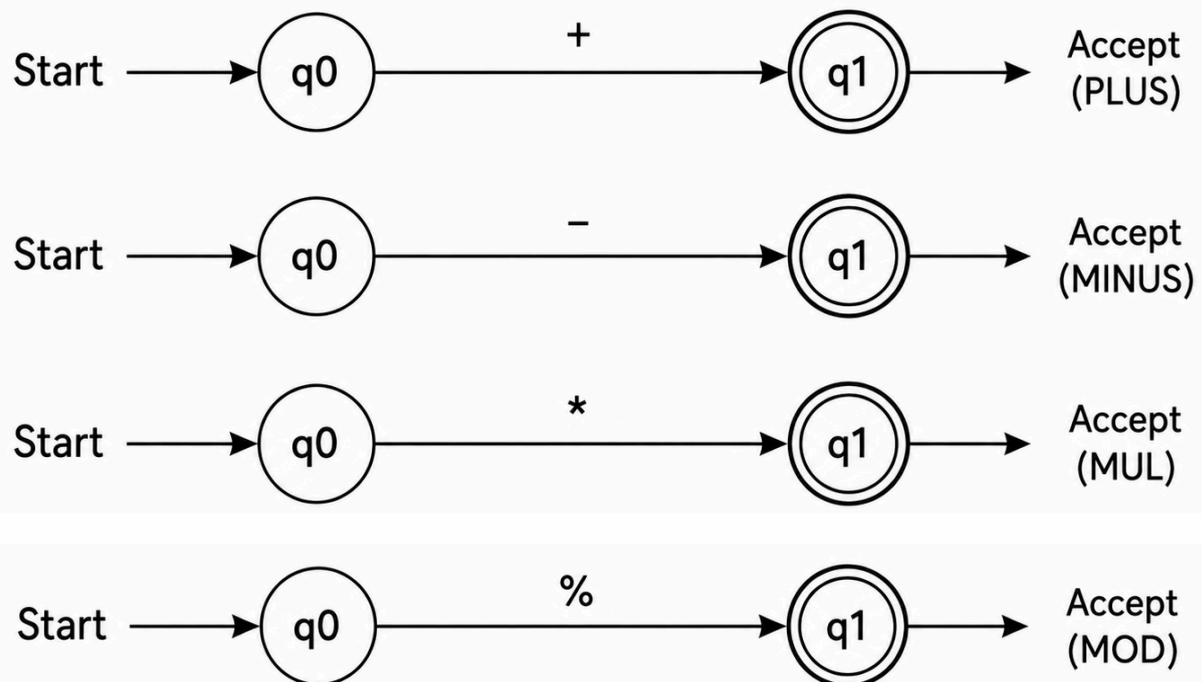

INTEGER & FLOATING-POINT NUMBER

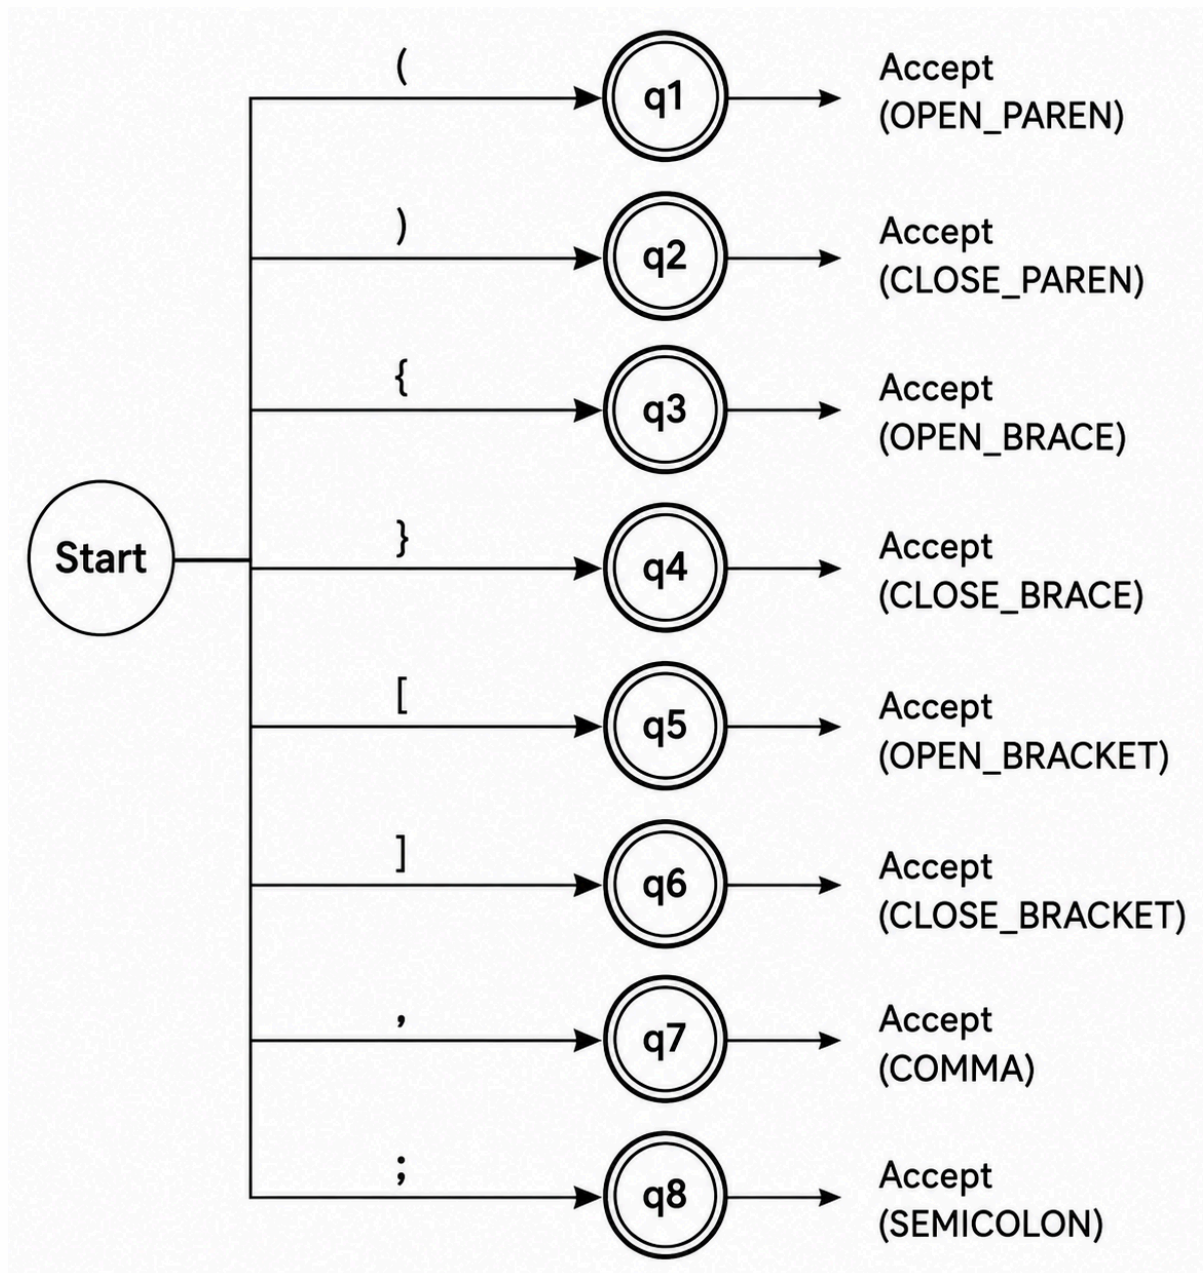

RELATIONAL OPERATORS

ARITHMETIC OPERATORS

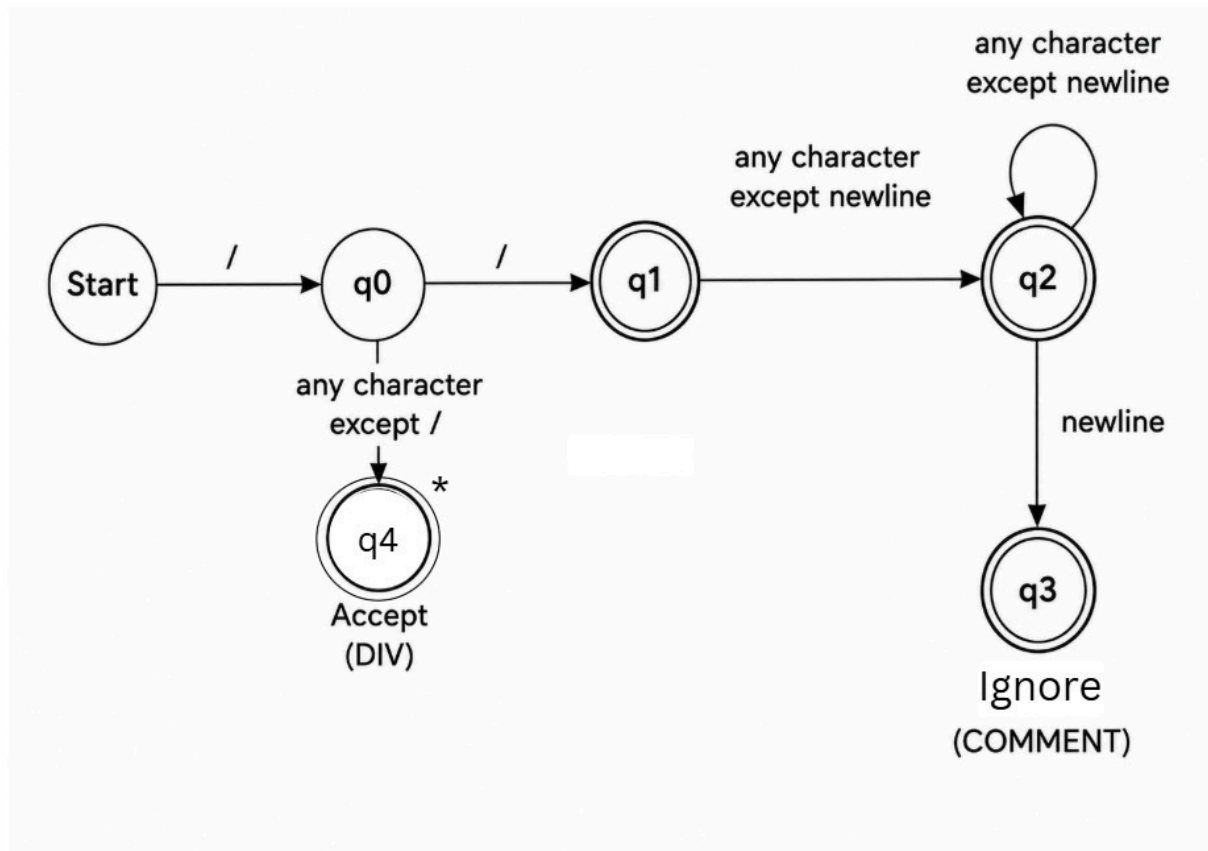

SEPARATORS (DELIMITERS)

Note: Each separator is a single character token. On reading the character, the lexer directly accepts the corresponding token.

COMMENT

Note:

- The lexer recognizes `/**` and then consumes all the characters until the end of the line (newline character). The whole sequence is treated as a comment token and is skipped (not added to the token list).
- `/'` not followed by `/'` is handled as DIV operator.

Letter = a-z, A-Z
 Digit = 0-9
 _ = underscore
 . = decimal score
 \n = newline
